# SIRO TRAINING FOR PUBLIC SECTOR

## BACKGROUND

The role of the Senior Information Risk Owner (SIRO) is a key function across all areas of the public sector, including NHS, and in some cases even suppliers to public sectors are required to demonstrate the role. The management of risk within the Public Sector, and increasingly its supply chain, is key to ensuring the security of information assets and making informed decisions in the event of an incident or breach.

## WHO SHOULD ATTEND?

This 1 day course is designed for SIROs within UK Public Sector organisations and their suppliers who need a more developed understanding of their responsibilities. Available in-person or virtually, depending on your requirements.

## SCOPE OF TRAINING

This training course will give you a greater understanding of your role and responsibilities as SIRO for your organisation. It will also cover both the principles of information risk management (IRM) and information assurance (IA) using several desktop, scenario based exercises to test and improve your understanding of managing information security incidents and information risk challenges. At the end of the training, you will have the confidence to deal with information risk and incidents should they occur within your organisation.

A Pre-course study package (approximately 2 hours reading) is also provided explaining the principles of information assurance and information risk management, focusing on:

- Confidentiality, Integrity & Availability
- Risk Appetite & Risk Tolerance
- Components of Risk
- Risk Assessment
- Business Impact Levels & Protective Markings
- The SIRO Role & its Responsibilities

  - Key Principles
  - Defining Incidents & Appropriate Responses
  - Mandatory Reporting

Post Incident Reviews & Continuous Improvement

## Previous Delegates

“Excellent day which clearly illuminates the key aspects of the SIRO role in a way that can be transported into the workplace”

“Excellent course content, being new to the SIRO role, it enabled me to fully understand where threats come from, and policies, procedures, and processes following a data breach.”
