PRIVACY STANDARD ISO/IEC 27701:2019

ADVENT IM

WHAT IS ISO/IEC 27701:2019?

Many organisations either individually or working in partnership with another body are processing different types and increasing amounts of personally identifiable information (PII).

ISO 27701 is a direct extension to ISO 27001/02 and expands upon their mandatory clauses and controls to protect PII within the context of an Information Security Management System (ISMS). Further, it continues the drive for organisations to implement data privacy by design and by default.

This new standard specifies the requirements for establishing a Privacy Information Management System (PIMS) as an addendum to an existing ISMS and applies to both controllers and processors of PII. Adopting the standard will strengthen and enhance all data protection and GDPR policies and procedures, which organisations have in place.

WHO DOES IT AFFECT?

All organisations who are certified or compliant to ISO 27001 will want to adopt this standard if they process PII. Organisations who want to be certified in ISO 27701 will need to be certified to ISO 27001 as this is a pre-requisite. Alternatively, an organisation may simply wish to adopt the principles of ISO 27701.

In either scenario, Advent IM can help your organisation implement the standard or to get certified.

WHAT NEXT?

With no obligation, Advent IM experts are happy to discuss what is likely to come and how it may impact you. In the first instance please call Gareth Williams on 0121-559-6699.
