# CYBER SECURITY FOUNDATION COURSE

## BACKGROUND

Cyber security is high on any business agenda and the frequency of attacks on businesses is increasing. The size of a business is not an indicator of its attractiveness to an attacker or an indication of the value of its information assets. Complex supply chains may make some SMEs a target due to their connections and the National Cyber Security Centre (NCSC) has stated clearly that supply chains have been under serious cyber-attack since at least 2017. This course provides Small to Medium Sized Enterprises (SMEs) with the knowledge to achieve a good level of cyber hygiene. It is based upon current guidance from the National Cyber Security Centre (NCSC) and industry best practice such as ISO 27001 and Cyber Essentials, and aims to mitigate the risk associated with common cyber-attacks.

## WHO SHOULD ATTEND?

This 1 day training course is designed for anyone who will have responsibility for ensuring that their organisation is protected in cyberspace but is not a cyber security or information security specialist.

## SCOPE OF TRAINING

The course will look at fundamental information security practices that can be applied to any organisation to help minimise the risk of data breaches from cyber-attacks and begin the process of embedding a security culture.

- Information risk management;
- Network security;
- User education and awareness;
- Malware prevention;
- Removable media controls;
- Secure configuration;
- Managing user privileges;
- Incident management;
- Monitoring;
- Home and mobile working
