ISO27002:2022 WHAT'S NEW?

A NEW STANDARD

In 2022, ISO27002:2013 saw a much-needed update. The main changes to the revised Standard are:

- The title has been modified;
- The structure of the document has changed, presenting the controls and associated attributes in an easier format;
- Some controls have been merged;
- Several new controls have been introduced.

PURPOSE

ISO 27002:2022 is to be used as a reference for determining and implementing controls for information security risk treatment in an information security management system (ISMS) based on ISO 27001. It can also be used as a guidance document for organisations determining and implementing commonly accepted information security controls.

CHANGES IN DETAIL

- Control Titles:
- Attribute table shows the value(s) of each attribute for the given control;
- Control what the control is:
- Purpose why the control should be implemented;
- Guidance how the control should be implemented;
- Other information explanatory text or references to other related documents.

There are now 93 Annex A Controls (reduced from 114)

There are **4** "themes" reduced from 14 to consider:

- People (8 controls)
- Organisational (37 controls) •
- Technological (34 controls)
- Physical (14 controls)

There are **11** new controls

There are 58 controls that have been re-numbered

There are 24 controls that have been merged

Each control has been associated with 5 attributes – attributes can be used to filter, sort or present controls in different views for different audiences:

- 1. Control type;
- 2. Information Security properties;
- 3. Cybersecurity concepts;
- 4. Operational capabilities;
- 5. Security domains.

Continuity

of Cloud Service

NEW CONTROLS EXPLAINED

New Control Number & Name

5.23 - Information Security for use

5.30 - ICT readiness for Business

8.10 - Information Deletion

5.7 - Threat Intelligence

	comply with legal, statutory, regulatory and contractual requirements for deletion
8.11 - Data Masking	To limit the exposure to sensitive data including PII, and to comply with legal, statutory, regulatory and contractual requirements
8.12 - Data Leakage Prevention	To detect and prevent the unauthorised disclosure and extraction of information by individuals or systems
8.16 - Monitoring Activities	To detect anomalous behaviour and potential information security incidents
8.23 - Web Filtering	To protect systems from being compromised by malware and to prevent access to unauthorised web resources
8.28 - Secure Coding	To ensure software is written securely thereby reducing the number of potential information security vulnerabilities in the software

ISO27002:2022

WHAT'S NEW?

Purpose

services

To provide awareness of the organisation's threat environment so that

To ensure the availability of the organisation's information and other

To ensure hardware, software, services and networks function correctly

with required security settings, and configuration is not altered by

To prevent unnecessary exposure of sensitive information and to

To specify and manage information security for the use of cloud

the appropriate mitigation actions can be taken

To detect and deter unauthorised physical access

associated assets during disruption

unauthorised or incorrect changes

UPCOMING DATES

- 31 October 2023 last date for Certification Bodies to be accredited;
- 31 October 2023 onwards after this date all certifications and re-certifications are to be done against 2022 version;
- 30 August 2025 recommended date by which transition assessments should be completed done;
- 31 October 2025 transition period ends and 2013 certificates will be invalid after this date.

WHAT'S NEXT?

- If you are already certified to ISO27001:2013, you will need to begin planning your transition to the new standard.
- If you were working towards the old standard you have until October 23 to certify to ISO27001:2013.
- If you are seeking a new certification you can start to work towards ISO27001:2022 now and gain certification from October 23 onwards.
