

PUBLIC SECTOR SENIOR INFORMATION RISK OWNER (SIRO) TRAINING

Background

The role of the Senior Information Risk Owner (SIRO) is a key function and should be in place across all areas of the public sector, including but not limited to; Police, Government, Healthcare, Nuclear, Education, and suppliers to these organisations.

This is a very senior role within an organisation and is normally an additional set of responsibilities for a director or similar level. As such, SIROs may need additional support in understanding the role and its responsibilities. Developing a deep and wide understanding of Information Assurance in this way helps the organisation build resilience and support effective and valuable information sharing.

The management of risk within the Public Sector, and increasingly in its supply chain, is key to ensuring the security of information assets and in making informed decisions to prevent or respond in the event of an incident or breach.

Who Should Attend

This 1 day course is designed for SIROs within UK Public Sector organisations and their suppliers who need a more developed understanding of their responsibilities. Available in-person or virtually, depending on your requirements.

Scope of Training

This training course will give you a greater understanding of your role and responsibilities as SIRO for your organisation. It will also cover both the principles of information risk management (IRM) and information assurance (IA) using several desktop, scenario based exercises to test and improve your understanding of managing information security incidents and information risk challenges. At the end of the training, you will have the confidence to deal with information risk and incidents should they occur within your organisation.
